

Uni-Grip™ Universal Disposable Radiography Holder

Taking x-rays, whether with film, phosphor plates or digital sensors, is simpler with the Uni-Grip Universal Disposable Radiography Holder. Unlike other disposable holders on the market, which require multiple units to perform a full mouth x-ray series, you only need one Uni-Grip for anterior, posterior and bitewings radiographs. Accommodates any #1 or #2 size digital sensor, film or phosphor plate. Uni-Grip is fast, accurate and its compact size and rounded corners are easy on the patient.
